

Analysis software for sustainable design

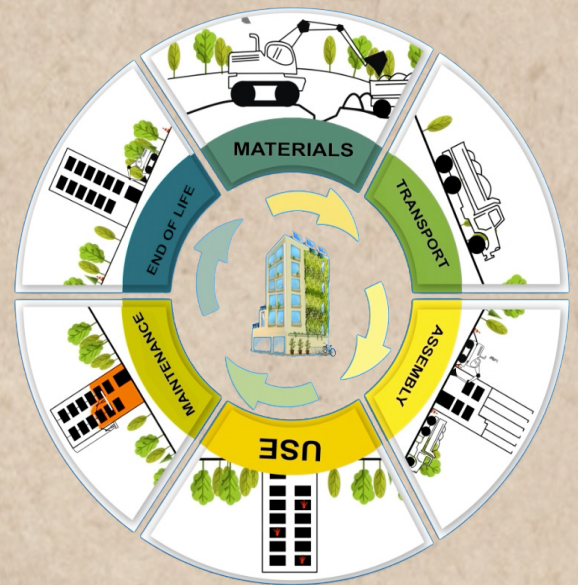

## SMART DESIGN FOR A SMART MARKET

eToolLCD is a world leading software that utilises life cycle design (LCD) and assessment (LCA) methodologies to provide comprehensive analysis of environmental and cost impacts of built form projects.

Life cycle assessment is the ultimate design process for achieving a genuinely high performing and sustainable outcome for your project. Over 100 residential, commercial and infrastructure projects around the globe have opted to use this powerful methodology using eToolLCD, which has resulted in savings of over 450,000 tonnes of CO2 emissions.

## WHY LIFE CYCLE DESIGN (LCD)?

- Attract finance and increase design efficiency
- Improve regulatory approvals and community support
- Boast a marketing edge by tapping into the already established demand for sustainable products
- Maintain investor/owner growth as other buildings rapidly become outdated
- Feel confident that you've achieved a genuinely sustainable outcome backed with a scientifically & internationally acclaimed design

eTool's pragmatic approach gives us confidence that we've got a good building at a good price. They really get the building process, the technology and most importantly, the market.

-Danny Psaros  
CEO, Psaros Group  
Winner of a 2014 National Banksia Sustainability Award
